About Me

From the moment I played my first video game, I knew software development would be a significant part of my life. The joy of crafting a beautiful front end, overcoming challenging tasks, and discovering optimizations that enhance code quality drives my passion for continuous improvement. Below are some projects that highlight my skills and commitment to learning.

EXPERIENCE

Laborhutt (www.laborhutt.com)

A website where people can find neighbors with pickup trucks, box trucks and cargo vans to help them move large items.

Laborhutt - Mover Registry

Developed a mover registry page that allows users to filter and find furniture movers. Implemented programmatic search engine optimization with Next.js's dynamic routing, server-side rendering and metadata management.

Laborhutt - LLM-based Text Validation

Developed and integrated a real-time validation system using OpenAI's API to analyze user-submitted text for potential privacy and terms of service violations. The system leverages advanced machine learning models to automatically detect sensitive information, preventing the entry of personal data and ensuring compliance with platform regulations.

Bug Tracker (bit.ly/4bWPD8X)

Developed a full-stack application that enables organizations to manage their projects. The application includes features such as a real-time dashboard, ticket issuing/management, and organization of team members/projects. Built with ReactJs, TypeScript, TailwindCSS, express and mongodb.

Portfolio Website (aomotosho.tech)

My personal website that showcases my projects. Built with ReactJs, SASS, and TypeScript.

GeckoType (bit.ly/3KzAnCU)

Full stack speed typing website with many features such as timed trials, word count trials, and persisted stats over time. Built with ReactJs, SASS, TypeScript mongodb and express.

Skills

Python, Java/Spring Boot, Javascript/Typescript, React/React Native, HTML/CSS, Tailwind, Node.js, Express, SCSS, Neovim.
